A Land of Promise.....

In splendid Oklahoma.
Land of the fairest God.
The finest, richest, country.
Mortal man has ever trod.

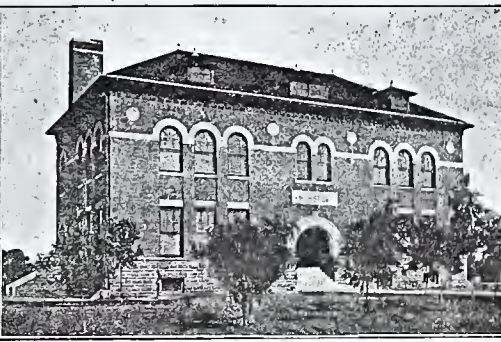

Oklahoma Territory was formally opened to white settlers on the 22d of April, 1889. By the first act of congress about three millions of acres were allotted; and when

the home-seekers. In September, 1893, the Cherokee Strip with 6,014,239 acres; in 1895, the Kickapoo reservation of 206,662 acres were thrown open; and then followed Greer County, long claimed as a part of Texas, but which the Supreme Court of the United States decided was a portion of the Territory. These, with the Kiowa, Comanche, Apache and Wichita reservation give Oklahoma Territory an area 24,778,000 acres, of which 1,725,000 are still included in Indian reservations. Here is a domain of 38,715 square miles rapidly being settled by a class of citizens of which any state or nation might well be proud, and comprising land the fertility of which is excelled nowhere on earth,

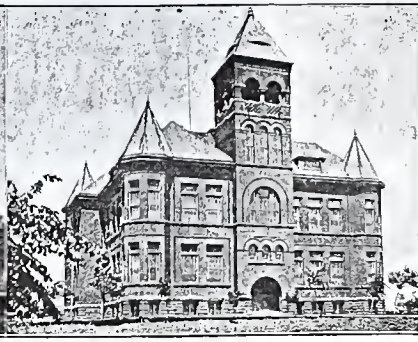

sea level, the lowest points being to the east central part of the Territory, and rising gradually to the west. The climate is exceedingly healthful. The winters are short and mild, the temperature rarely reaching the zero point. In summer a constantly blowing south breeze tempers the rays of the sun, and the nights are cool and pleasant, inducing refreshing sleep. The spring and fall months are most delightful, and are surpassed nowhere. The soil is rich and is of sufficient depth and character to render it almost inexhaustible, and owing to climatic advantages, due to its far southern situation and elevation, no other portion of the United States has such a diversification of

in June, 1890, the territorial government was formed, "No Man's Land," containing more than three and a half millions was added. In September of the same year the Sacs and Fox, Iowa and Pottawatomie reservations with 1,282,434 acres were opened, and in the spring of 1901, 4,297,771 acres of the Cheyenne and Arapaho lands were ceded to

and under a sky and in a climate equaled nowhere else on the footstool.

The surface of the country is generally a rich rolling prairie, with many timber-fringed streams, and with quite an area of timber land in the east, aside from the river bottoms. The altitude ranges from 800 to 4000 feet above

crops, covering as they do, wheat, oats, rye, barley, corn, cane, broom corn, millet, many cultivated and wild grasses, and large and small fruits of every variety, grapes, peaches, apples, pears and watermelons and cantaloupes, produce enormously and attain perfection in size and quality.

melons weighing over 100 pounds have been produced in the Territory. Hundreds of cars of potatoes have been shipped from this Territory this season, the present crop of the Territory averages from 50,000 to 100,000 bushels annually. From 50,000,000 to 75,000,000 bushels of corn is produced annually. The wheat crop is generally 25,000,000 bushels each year. The annual cotton yield is 150,000 bales, the fiber is of superior quality, equal to the best sea-island grades, and commands an advance price over Southern cotton. Sheep, hogs, cattle, horses and mules are cheaply and easily raised on the rich grasses with which the country abounds, and they are being graded up to a high standard.

The country is rich in building stone, clay for brick, cement, salt, asphaltum, petroleum and iron, copper, gold and silver have been found.

There are sixty flouring mills in Oklahoma a number of them with a daily capacity of 400 barrels. Their output is of the highest grade known; one Oklahoma mill receiving the first premium at the World's Fair at Chicago; others winning gold medals at the Omaha Exposition. The bank deposits of the Territory are more than \$20,000,000, which is a highly creditable showing for a country settled but 13 years, and the population of which is largely agricultural. It is conservatively estimated that the population of the Territory is at present not less than 500,000, and every hour accessions are being made to it. The Territory is yet in its infancy, and the development of the next few years will be of a character to astonish the world. Good improved lands in this favored section can be bought at from \$5 to \$20 per acre; unimproved lands sell for much less, and may be had on easy terms. Every encouragement is offered new-comers, and prices are lower here than for land equally as good elsewhere. In the matter of educational opportunities, it must be borne in mind that conditions here are unique, and that although the white settlements are but thirteen years old, the pioneers of Oklahoma were school-bred men, and transplanted the system, tried and tested by one hundred years of experience in the old states, and it took root and flourished within a year of its setting out, watered and cultivated by as grand a set of men as ever transformed a wilderness, or planted the ban-

ner of progress on the outposts of civilization. In the Territory are 1879 school districts, with school buildings valued at \$454,574. The inhabitants are 96 per cent Americans by birth, and are from all parts of the Union, with a per cent of illiterates lower than the great majority of the states can show. The people are strong of mind and purpose, hospitable, neighborly, self-reliant and filled with the spirit of progress which ever marks the community of Americans settled in a new country, which is destined under the impulse of the best blood in the land to take a prominent place in the history of the nation. Socially they are democratic to a degree unheard of in the older

tlement, a university, a normal school and an agricultural and mechanical college were open for the reception of pupils, and the pupils were ready for instruction.

The assessed valuation of property for 1901, was \$60,464,696, an increase for the year of \$11,126,035. The actual value would doubtless be at least thrice this amount. The territorial tax levy for 1901, was 7½ mills per dollar, producing a revenue of \$452,485. With an increase of population in ten years amounting to 544 per cent, a taxable valuation greater than that of any state upon its admission to the Union, a school population equally as great, and an area nearly five times greater than Massachusetts with

its three millions of people, it would seem as though this typical American aggregation of homesteaders might hope in time to be advanced to the dignity of statehood. Oklahoma has four great lines of railroads penetrating or crossing it, and others are in process of construction, thus giving it direct connection with the Gulf on the south, Kansas City, Omaha, St. Louis, Memphis and other markets on the north and east, and to river rates at Memphis and Fort Smith, and to the Pacific on the west. The resources of this beautiful country are beyond computation, and the inducements to settlers to make here their homes are such that another decade will see the state of Oklahoma well to the front among the great commonwealths of the southwestern country. Socially and politically, it enjoys a great advantage because of its geographical position and the conditions attending its settlement; for here the men of every section of a common

country have met on neutral ground and on terms of absolute equality. Lying between the two sections, North and South, it owes nothing to party, and is an undivided heritage of the American people, with its own untrammeled future to realize in accordance with the noblest instincts and greatest wisdom of its inhabitants. The predominant impulse of the people is that of the home-seeker and builder; and the future of such a people is bound to be one of solid, substantial growth into that ideal state of existence which is the aspiration of free men the world over.

The metropolis and chief business center of this favored Territory is Oklahoma City, with a population of nearly

Broadway

states, and caste has not yet begun to make distinctions based on property, occupation (so the occupation is honorable), or birth; and every man is a gentleman and every woman a lady until they show themselves to be otherwise.

As showing the spirit of the settlers of this new Territory, among their first acts was the setting aside of about two million acres of land to form the basis of a permanent school fund. The first public institutions were for educational purposes—the first public buildings were colleges, and the first and only bonded debt contracted by this wonderful people was for the erection of buildings for higher education. In less than a year from the first day of set-

20,000 people, and a little more than a dozen years ago the present site of the city was merely a watering station for the Santa Fe Railway. At present the platted area of the city is approximately two thousand acres, of this about fourteen hundred acres in a compact body is practically all improved and occupied as residences or graced by extensive business blocks. The population has almost doubled within the past two years, but the remarkable development of Oklahoma City has not been of that sudden or unreasoning kind, but has been a rapid and substantial growth, and every step in the path of its progress has been in exact harmony with its growing usefulness, and has advanced just as its field of enterprise has expanded and is still growing at a rapid rate as the vast resources of this Territory are being developed. On the 1st of January, 1902, according to compilations prepared with great accuracy by those enterprising and most creditable publications, "The Daily Times-Herald" and "The Daily Oklahoman," there were more than one hundred jobbing houses and manufacturing establishments in this city. The many jobbing houses have their salesmen on the road throughout Oklahoma and Indian Territory and West Texas, and their representatives find no difficulty in successfully meeting competition with the entire country, making customers and holding them against all comers.

In this city are representatives of almost every known mercantile business, and some of them have an amount of capital invested, and do a business which would be accounted large in any of the great commercial centers of the country. They are conducted, too, by men trained in the conduct of large affairs, for it must not be forgotten that the business men of Oklahoma were business men of New York, Chicago, Boston, Baltimore, St. Louis, New Orleans, Denver, San Francisco, Kansas City, Omaha and other large cities, before they became citizens and business men of Oklahoma. The population is made up almost entirely of native Americans, or thoroughly Americanized Europeans. Among the lines of wholesale business established here are liquors, beer, meats, furniture, carpets, rubber and oil clothing, groceries, produce, brick,

cigars, hardware, harness, saddlery, cotton gins, compresses, stock yards, dry goods, chinaware, queensware, wagons, carriages, machinery, ice, bottling works, flour mills, corn mills, drugs, soap, dental supplies, coal, wood, electrical supplies, lumber, planing mills, elevators, broom factories, cotton oil mills, jewelry, paints, glass, packing houses, sash and doors, oil, feed, foundry, machine shops, biscuit factory, agricultural implements, etc.

The importance of Oklahoma City as a railroad town

freights leave this city daily, representing the shipments of the wholesale dealers to their customers, in Oklahoma and Indian Territories, Texas and elsewhere. The passenger traffic is represented by the arrival and departure of eighteen trains daily, and the number who make this their final stopping place is a marvel to the observer. The various railroads employ more than 150 men at their passenger and freight stations, and at the round-houses, yards and division headquarters of the Frisco, several hundred more find employment.

Five switch engines are constantly busy handling the freight business of this city. The M., K. & T. has located its terminals, and will open a vast deal of territory to the enterprise of this city when it shall have been completed to this point. The Oklahoma and Southwestern, a new road, has reached Lawton, and is grading on to the southwest. It will thus be seen that the great railway systems fully recognize the claims of this city, and that it is no small factor in their extension from all points of the compass to tap this important shipping place. As a place for safe investment in real estate there is none better on the continent, prices in cities no larger than this greatly exceeding those prevailing here and, too, with prospects for further development not approaching the increase assured to Oklahoma City, which even now excels them in the character of improvements already made. The frontage of business blocks aggregates more than two miles, and they are of a character calculated to surprise the visitor from any part of the country, who is hardly prepared to find a veritable modern city of brick and stone, where thirteen years ago the inhabitants lived and conducted business under tents and rude wooden shacks. From June 1, 1900, to January 1, 1902, thirteen hundred houses had been erected in this city, and many hundreds of persons were living in tents awaiting the construction of dwelling places of a more permanent character. Such a record as this will give some idea of the phenomenal growth of the city, and the consequent activity of the business and labor markets. The entire business portion of the city is provided with well paved streets, and

Main Street

may be seen from the fact that on the Frisco system it ranks third in earnings, St. Louis and Kansas City only doing more business for the road. On the Choctaw it is second, Memphis occupying the first place, and on the great Santa Fe system, nothing equals its contributions to the treasury of that company between Kansas City and Galveston. The total railroad business of Oklahoma is estimated at more than two and a quarter millions of dollars annually, seventy-five per cent of this being contributed by the wholesale trade. Five heavy trains of local

conducted business under tents and rude wooden shacks. From June 1, 1900, to January 1, 1902, thirteen hundred houses had been erected in this city, and many hundreds of persons were living in tents awaiting the construction of dwelling places of a more permanent character. Such a record as this will give some idea of the phenomenal growth of the city, and the consequent activity of the business and labor markets. The entire business portion of the city is provided with well paved streets, and

sidewalks are almost wholly of brick, stone or concrete. A modern system of sewers has been constructed under competent engineers, and the sanitary condition of the city is of a high grade and under constant and intelligent supervision. The city owns its waterworks, in which it has invested more than \$100,000, and which provides an abundant supply of wholesome water from the sand strata of the North Canadian river. The water is obtained from wells sunk deeply in the purifying sands, and is piped to the city. There is an excellent electric light system, gas works, power plant, two excellent telephone exchanges with more than 1500 subscribers, and with ample long distance connections with the outside world. There is an excellent public library costing \$30,000, and due to the generosity of Mr. Carnegie. An electric street car system is being put in extending its lines to all parts of the city.

The total cost of the more than one thousand buildings erected in Oklahoma during the year 1901, with the value of the land on which they stand, was \$2,151,000. Among them were more than fifty business buildings and blocks, ranging in cost from \$1000 to \$60,000.

As a further evidence of the enormous growth of the city, the sales of stamps at the postoffice show a gain in four years of 400 per cent. Among the many interesting facts relating to Oklahoma, the following are culled as indicative of peculiar conditions prevailing here which should not fail to attract the attention of persons seeking homes. The city has never had a boom, and has no competitor in a business way nearer Kansas City and Dallas. No house has been built during the past year that was not sold or rented before completion. Ninety-five per cent of jobbing trade of Oklahoma is done in this city—this is submitted for the information of those seeking the principal city from a business standpoint.

There are several excellent newspapers, two being daily. The Times-Journal is an afternoon seven-column 8, 10 and 12-page paper, taking the Associated Press reports, and edited with a spirit and intelligence which would be a credit to any city in the land. "The Oklahoman" is a morning paper, same size as the "Times-Journal," membership in the Associated Press, and most ably conducted. Almost all the secret societies have lodges here, and the membership is large and active. Organized Labor has a firm footing in this city, numbering a membership of 2500, comprising representatives of twenty-six different trades and labor unions. The Central Trades and Labor Assembly will shortly erect a Labor Temple to cost \$25,000, which will be, when completed, one of the most costly and elaborate ever constructed in the western

country.

No city is completely equipped for the performance of all its duties to itself, posterity and the world, without a Commercial Club, or an organization composed of the most active men of the various professions and callings, whose self-imposed duty it is to assist with their money, influence and advice in the advancement of the interests of the community with which they are identified. Oklahoma City, therefore, has its "Oklahoma City Club," with a membership of 225 of the best, strongest, wisest and most public-spirited of the population. They are organized not only for the betterment of the material welfare of the city, receiving accessions of wealth, desirable new citizenship, the furtherance of the mercantile weal of the city, but they make it their duty and pleasure to contribute to the moral

instant. One of the first religious societies in the city is St. Joseph's Roman Catholic church, which is erecting a handsome edifice to cost \$70,000.

The First Baptist church is one of the strongest in the city, with a large and comfortable church building.

The Christian church is largely represented, and is putting up a \$35,000 building.

Pilgrim Congregational church has a large following and valuable church property.

The First Methodist Episcopal church was the first to dedicate a building to the service of God, and also includes a parsonage. The First Presbyterian church is building a \$25,000 house of worship. The M. E. church, South, occupies a handsome brick building, and is strong numerically and in influence. St. Paul's Episcopal, The

Harrison Avenue Congregational, the Cumberland Presbyterian, the Washington Avenue Baptist, the Seventh Day Adventists, the Capital Hill Christian, the Evangelical Lutheran, the German M. E. church, the Salvation Army, the Holiness, Christian Science, and five negro churches are also represented here, and are largely attended, and all exert their wonted influence on the spiritual nature of the community. Nearly all of them have creditable houses of worship.

The banking capital of the city is large and ready at any time to meet all legitimate demands upon it, and interest rates are exceptionally low for a country in process of development. During 1901 bank deposits increased more than 100 per cent., and in four years the individual deposits of the banks of Oklahoma City grew from \$400,000 to \$2,500,000. In January of this year the total school attendance was 3,350 pupils, with 69 enthusiastic and competent instructors. There were seven public school buildings, so crowded that it was estimated that

and social welfare of the community, as well as to its material. They occupy large and comfortably appointed rooms in the postoffice building, and are an important influence in the upbuilding of the city.

The city fire department is a credit to the community, and has no superior in efficiency and equipment in any city of like size in the country.

The police department is one of the city's prides, and it has a reputation for efficiency and gallantry meriting all the praise bestowed upon it.

The first Sabbath after Oklahoma was opened there were open-air religious services held which were numerously attended, and the interest has never waned for an

500 pupils were unable to attend on account of insufficient accommodations. This defect is being remedied by the erection of more school houses. The importance of this wonderful city, and the many inducements it holds out to settlers, are so many that it would require a volume to enumerate them; and in a brief sketch like this it is possible only to suggest a very limited number. Besides, such is its rapid growth that only a daily bulletin of improvements would ever enable a writer to approximate in accuracy a review of what it is at any given time. That it is a marvel of enterprise, a city of limitless possibilities, and a wonder to the nations there is no doubt; and speculation as to its future, if based upon the accomplishments of its past, would sound like fairy tales or the imaginings of an overwrought fancy. Yet, predilections must be based upon past experiences, and what the strong men of Oklahoma City have accomplished hitherto, and their successors are capable of doing in the future, and with the experience of the past to inspire and guide them.

All hail to these pioneers, who have built a great city in a wilderness, and have made the wilderness to blossom as the rose, and who yet live in the vigor of their magnificent manhood, to reap and enjoy the wonderful harvest of their own sowing and tending. They are men indeed, and their fellows are proud of them and would accord them every honor they have so nobly won.

UNIVERSITY DEVELOPMENT CO., Anton H. Classen, President, Miss Margaret McKinley, Secretary and Treasurer; Sales Agent, Ed. L. Dunn.—This company has placed on sale 1,100 lots, the proceeds of which sale are to be used for the building, within a mile and a half of the business center of Oklahoma City, of the "Epworth University," an institution to be under the joint patronage of the two great branches of the Methodist Episcopal Church. This is an undertaking marking an epoch in the history of the church founded by John Wesley, which in the establishment of this University has more nearly reached the point of re-uniting than at any time for nearly sixty years, when it was divided, North and South. It has remained for Oklahoma, lying between the two extremes, to set afoot a beneficent plan whereby these two may at last, in part, be one. Fifty acres have been reserved for a campus, and the site is on high rolling ground, about eight minutes distant from the business part of the city. Lots range in price from \$20.00 to \$300.00 each, and the proceeds are for the building of the University. Terms half cash, balance in two equal payments, within a year, with 8% interest. The directors of this noble undertaking are Anton H. Classen, C. F. Coleord, Margaret McKinley, John W. Shartel and F. B. Ziegler,

and there are no better known names in the territory than these. Write them for full particulars, map, price list, etc. This is valuable property, and a noble work is being done.
